BEFORE YOU START

What you need

- The device, with its Syncloud card inserted
- Its power supply
- An ethernet cable
- A router with internet access and a free network port
- A phone or computer on the same network
- An email address, for your Syncloud account

OPTIONAL

A USB disk for more storage. The card has room to start with; a disk can be added at any time from Settings.

The first start takes a few minutes. Leave the device powered while it prepares itself.

THE SUBSCRIPTION

The first month is free

Why a subscription? Syncloud shows no ads and does not sell or share your data. Your files stay on your device, not on our servers. The subscription is how the project is paid for, and it covers the services around your device:

- its name, such as `name.syncloud.it`
- the certificate that secures it
- the relay, for networks that cannot be reached from outside
- mail relay and support

Current price at syncloud.it. If it ends, nothing is deleted: the device, apps and data stay. Only the name stops working. You can also use your own domain instead; see Dev mode in the wiki.

HELP

Supplied by

Syncloud

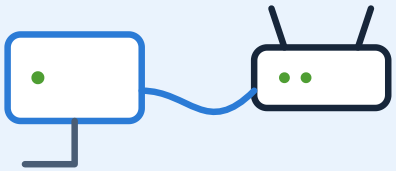

Your own server, ready in minutes

Files, passwords, photos, media and smart devices on a server you own, with apps installed in one click.

Up-to-date instructions
`syncloud.org/setup`

1 Connect

1. Check the Syncloud card is in the device.
2. Connect the device to your router with the ethernet cable.
3. Plug in the power supply. The device starts on its own.
4. Wait a few minutes for the first start to finish.

2 Activate

1. Find the device's address: the Syncloud app for Android finds it on your Wi-Fi, or look for it in your router's list of connected devices.
2. Open it in a browser, for example `https://192.168.1.20`. A certificate warning at this step is expected.
3. Create your free account at syncloud.it and choose a name for the device.
4. Set the device's own username and password. Keep them safe.

Syncloud app for Android
Google Play

DEVICE NOT FOUND?

Check the cable and the router's lights, give it a few more minutes, then follow the instructions at `syncloud.org/setup`

3 Use it

1. Open your device at its name, such as `https://name.syncloud.it`
2. Install apps from the App Store in one click. Each opens at its own address, such as `nextcloud.name.syncloud.it`
3. To reach it away from your network, turn on external access in Settings, Access.

IN THE APP STORE

Nextcloud · Home Assistant · WordPress · Bitwarden · Jellyfin · Paperless-ngx · Pi-hole · Syncthing · and many more
